PREFACE	i
CONTENTS	iii
CHAPTER 1 – INTRODUCTION	1
1.1 General	1
1.2 Structure of the book	3
CHAPTER 2 – MATERIALS AND TECHNIQUES	5
2.1 Materials	5
2.1.1 General	5
2.1.2 Fibers	5
2.1.3 Matrix	7
2.1.4 Composite materials	7
Example 2.1	9
2.1.5 Adhesives	10
2.2 Strengthening systems	11
2.2.1 Wet lay-up systems	12
2.2.2 Prefabricated elements	12
2.3 Basic strengthening technique	13
2.4 Special techniques	15
2.4.1 Automated wrapping	15
2.4.2 Prestressed FRP	16
2.4.3 In-situ fast curing using heating device	17
2.4.4 Prefabricated shapes	18
2.4.5 Near-surface mounted reinforcement	19
2.4.6 Mechanically-fastened FRP	20
2.4.7 Application of textile-reinforced mortar (TRM) jacketing	21
CHAPTER 3 – BASIS OF DESIGN	23
3.1 General	23

	<u>page</u>	
3.2	Material constitutive laws	23
	3.2.1 Calculation of resistance – full composite action	23
	3.2.2 Calculation of resistance - debonding	25
	3.2.3 Serviceability limit state	25
3.3	Bond at the FRP – substrate interface	25
	3.3.1 General, behavior	25
	3.3.2 Analytical model	27
	Example 3.1	28
 CHAPTER 4 – FLEXURAL STRENGTHENING		 31
4.1	General	31
4.2	Initial situation	32
4.3	Ultimate limit state – failure modes	33
4.4	Ultimate limit state - calculations	35
	4.4.1 Full composite action	35
	4.4.2 Loss of composite action	37
4.5	Ductility considerations	40
4.6	Summary of design calculations – ultimate limit state	41
4.7	Example	42
4.8	Serviceability limit state	44
4.9	Columns	45
 CHAPTER 5 – SHEAR STRENGTHENING		 49
5.1	General	49
5.2	Shear carried by FRP	51
5.3	Summary of design procedure	54
	Example 5.1	55
	Example 5.2	56
	Example 5.3	57
5.4	Beam-column joints	58
 CHAPTER 6 – CONFINEMENT		 61
6.1	General	61
6.2	Behavior and constitutive modeling of FRP-confined concrete	62
	6.2.1 Behavior	62
	6.2.2 Design model	64

	<u>page</u>
Example 6.1	68
6.3 Chord rotation and ductility	68
Example 6.2	73
Example 6.3	73
6.4 Lap-splices	74
6.4.1 Behavior and design	74
Example 6.4	76
6.4.2 Effect of lap-splices on chord rotation	77
6.5 Rebar buckling	78
Example 6.5	79
6.6 General comments on FRP-jacketed columns	80
CHAPTER 7 – <i>DETAILING AND PRACTICAL EXECUTION IN CONCRETE</i>	81
7.1 General	81
7.2 Detailing	81
7.2.1 Flexural strengthening	81
7.2.2 Shear strengthening	83
7.2.3 Confinement	84
7.3 Practical execution	86
CHAPTER 8 – <i>STRENGTHENING OF MASONRY WITH COMPOSITES</i>	89
8.1 General	89
8.2 Configuration of composites for masonry strengthening	90
8.2.1 Out-of-plane or in-plane flexure	90
8.2.2 In-plane shear	91
8.2.3 Confinement	93
8.2.4 Consolidation of vaults and arches	95
CHAPTER 9 – <i>DESIGN MODELS FOR FRP-STRENGTHENED MASONRY</i>	95
9.1 General	95
9.2 Out-of-plane flexure combined with axial force	95
9.3 In-plane flexure combined with axial force	98
9.4 Design examples on flexural strengthening	101
9.5 In-plane shear combined with axial force	102
9.5.1 Shear walls	102
9.5.2 Beam-type elements	104

	<u>page</u>
9.6 Design examples on shear strengthening	106
9.7 Confinement	106
CHAPTER 10 – DURABILITY	109
10.1 General	109
10.2 Temperature effects	109
10.3 Moisture	109
10.4 UV light exposure	110
10.5 Alkalinity and acidity	110
10.6 Galvanic corrosion	111
10.7 Creep, stress rupture, stress corrosion	111
10.8 Fatigue	111
10.9 Impact	112
