Specific Structure and Functions							
<input type="checkbox"/>	Cover of shrubs (chamaephytes and nanophanerophytes) more than 30%		<input type="checkbox"/>	Absence or low cover of synanthropic/nitrophilous species (species of Artemisietea / Stellarietea)		<input type="checkbox"/>	Presence/practice of normal (regular) grazing
<input type="checkbox"/>	Abundance of perennial grasses		<input type="checkbox"/>	Absence of evidence(s) of primary or secondary succession		<input type="checkbox"/>	Absence of indications of significant/important erosion (e.g. crevasse-like erosion)

Prospects of Structure and Functions				
Future Trend	<input type="checkbox"/> FV No P or T of high importance and up to 1 of medium importance or positive impacts balance higher number or importance of P or T	<input type="checkbox"/> U1 Up to 3 P or T of medium importance or positive impacts balance higher number or importance of P or T	<input type="checkbox"/> U2 At least 1 T or P of high importance and/or more than 3 P or T of medium importance without positive impacts being able to balance them	<input type="checkbox"/> XX Not able to assess P or T
Future status	<input type="checkbox"/> FV Struct. & funct. are expected to be in FV status in more than 75% of the studied locality	<input type="checkbox"/> U1 Struct. & funct. are expected to be in FV stat in 50-75% of the studied locality and not more than 25% in U2 status	<input type="checkbox"/> U2 Struct. & funct. are expected to be in FV status in less than 50% of the studied locality or more than 25% in U2 status	<input type="checkbox"/> XX: Not able to asses future conservation status in > 50% of the studied locality
Restoration possibility	<input type="checkbox"/> easy	<input type="checkbox"/> possible with an average effort	<input type="checkbox"/> difficult or impossible	<input type="checkbox"/> unable to assess
